SUMMARY

A learning stage AIML developer building practical machine learning and AI integrated solutions using Python. I have hands-on experience training models, preprocessing data, and integrating ML workflows into applications. Along with this, I enjoy creating simple and responsive user interfaces using HTML, CSS, and JavaScript and connecting them to backend APIs. I like working across both model development and UI-building to create complete, user-focused AI applications, and I'm continuously improving my skills to build more impactful projects.

EDUCATION

B.Tech, Computer Science and Engineering	Graduating July 2026
University of Engineering and Management, Jaipur	7.52 CGPA
Class 12th, CBSE Board (Completed: 2022)	Graduating
Kendriya Vidyalaya No.3, Jalandhar	82.4%
Class 10th, CBSE Board (Completed: 2020)	Graduating
Kendriya Vidyalaya No.2 (ARMY), Jodhpur	82.2%

TECHNICAL SKILLS

Programming Languages: Java, Python(Numpy , Pandas), Machine Learning(Supervised)

Database management system: MySql

Web Technologies: React Js, HTML ,CSS ,JavaScript

Certifications: Joy of Computing using Python(NPTEL), Soft skill Development(NPTEL) , Enhancing Soft Skills and Personality(NPTEL),Generative AI: Introduction and Applications(Coursera)

EXPERIENCE

Acehack 2.0,University of engineering and management, jaipur: Team Member – python Developer March 2023

- Built a Python-based language translator for Rajasthan police that converted audio from one language to another based on user input.
- Utilized libraries like 'googletrans','speechrecognition' and 'Tkinter' to implement translation and GUI features.
- Gained practical exposure to real-time problem-solving and teamwork during the 24-hour hackathon.

CodeFiesta 2.0 – Global institute of technology Hackathon, Jaipur: Ideation Team – AI Product Designer october 2023

- Pitched an AI-based transcript generator that extracts text from YouTube videos, summarizes the content, and auto-generates quiz questions.
- Presented the solution architecture, use-case, and tech stack plan (Python, NLP models, YouTube API) to the judging panel.
- Gained experience in product ideation, planning under time constraints, and effective tech pitching.

PROJECTS

• Ransomware network Detection ML model

Developed an end-to-end malware detection system capable of identifying malicious network behavior using supervised machine-learning techniques. Collected and processed a large network-traffic dataset , cleaned and engineered relevant features, and trained models to classify benign vs malicious activity. Implemented the full ML pipeline including data preprocessing, exploratory analysis, feature reduction, model training, evaluation ,

• Multimodal Medical Chatbot

Developed a Python-based health chatbot integrating speech recognition and image input (skin conditions, reports) to provide health-related guidance using LLM APIs. Implemented end-to-end pipeline including audio

capture, voice-to-text conversion, image preprocessing, and structured prompt creation. Built a responsive front-end interface enabling real-time user interaction through voice and visual data. Integrated external medical-knowledge APIs and applied basic NLP techniques to improve intent understanding and response relevance. This project demonstrates strong skills in Python, API integration, multimodal AI workflows, and building practical AI tools focused on real-world usability. ,

- **AI Maths solver using hand gesture tracking**

Developed an AI-powered math solver that detects and tracks fingertip-drawn equations using hand gesture recognition. Used MediaPipe and OpenCV for real-time hand tracking and gesture visualization. Converted drawn gestures into mathematical expressions with custom logic. Integrated Gemini AI to interpret and solve the equations accurately. Demonstrated expertise in computer vision, real-time processing, and AI model integration.

,

- **Comprehensive study resource website**

Developed a study resource website that centralizes programming materials using technology (PHP, MySQL, HTML, CSS, JavaScript). It features a vast collection of curated study content, high-quality video tutorials, quick reference cheat sheets, and detailed installation documentation. The platform is designed to enhance the learning experience by providing all necessary resources in one accessible place. ,

- **Legal situation assessment website**

Developed an interactive website designed to help users determine the legality of various situations in India, with bilingual support in Hindi and English. This project aims to educate users about Indian law in an accessible, user-friendly manner by leveraging the power of Gemini AI to provide accurate and relevant legal information.
