Professional Summary

Computer Science undergraduate with hands-on experience developing AI/ML integrated applications and full-stack web solutions using Python, JavaScript, HTML, and CSS. Skilled in building end-to-end software pipelines, training supervised machine learning models, and connecting frontend interfaces to backend APIs. Proven ability to collaborate in fast-paced hackathon environments, debug complex systems, and ship working software. Eager to learn new technologies and contribute to high-quality, defect-free software deployments.

Technical Skills

Languages: Python, JavaScript, Java, PHP, HTML, CSS

Frameworks & Libraries: React.js, NumPy, Pandas, MediaPipe, OpenCV, Tkinter

Machine Learning: Supervised Learning, Feature Engineering, Model Training & Evaluation, NLP

Web Development: Frontend UI Development, REST API Integration, Responsive Design

Database: MySQL

Tools & Platforms: Git, GitHub, Gemini AI, Google APIs, Speech Recognition, LLM APIs

Soft Skills: Analytical Thinking, Team Collaboration, Verbal & Written Communication, Fast Learner

Hackathons & Collaborative Experience

Acehack 2.0 – Python Developer

March 2023

University of Engineering and Management, Jaipur

24-Hour Team Hackathon

- Developed a Python-based real-time language translation tool for Rajasthan Police, enabling audio-to-audio translation across multiple languages based on dynamic user input.
- Implemented end-to-end translation and GUI pipeline using `googletrans`, `SpeechRecognition`, and `Tkinter`, delivering a functional prototype within the 24-hour deadline.
- Collaborated in a team to ideate, develop, test, and demo the solution under time constraints, demonstrating strong problem-solving and communication skills.

CodeFiesta 2.0 – AI Product Designer

October 2023

Global Institute of Technology, Jaipur

Ideation Round

- Designed and pitched an AI-powered transcript generator that extracts text from YouTube videos, summarizes content, and auto-generates quiz questions using NLP models and the YouTube API.
- Presented the full solution architecture, use-case scenarios, and tech stack (Python, NLP, YouTube API) to a panel of judges, demonstrating clarity in technical communication.
- Strengthened skills in product ideation, structured planning, and presenting software design decisions under competitive time constraints.

Peer Coding Mentor – Informal

2023 – Present

University of Engineering and Management, Jaipur

Voluntary

- Guided junior batchmates on Python fundamentals, data structures, and ML project setup, improving their understanding of core programming concepts.
- Explained debugging strategies and code review practices, fostering a collaborative learning environment within the peer group.

Projects

Multimodal Medical Chatbot | *GitHub*

Python, LLM APIs, SpeechRecognition, NLP

- Built voice + image health chatbot (3 modalities) with sub-2s response time; integrated 2 medical APIs with NLP intent parsing at **~85%** accuracy.
- Engineered full pipeline – audio capture → voice-to-text → image preprocessing → LLM prompt – with responsive frontend tested across 10+ use cases.

Ransomware Network Detection – ML Model | *GitHub*

Python, Scikit-learn, Pandas, NumPy

- Trained supervised classifier on **5,000+ traffic samples**; achieved **93%+ accuracy** and reduced false-positive rate by **18%** vs. baseline.
- Built end-to-end ML pipeline: data cleaning, feature engineering on 20+ attributes, dimensionality reduction, model training, and evaluation.

AI Math Solver – Hand Gesture Tracking | *GitHub*

Python, MediaPipe, OpenCV, Gemini AI

- Built real-time fingertip equation solver using MediaPipe + OpenCV at **24+ FPS**; integrated Gemini AI achieving **90%+ solve accuracy** across 15+ equation types.

- Implemented gesture-to-expression parser eliminating keyboard input entirely; validated across fractions, exponents, and multi-step problems.

Comprehensive Study Resource Website

PHP, MySQL, HTML, CSS, JavaScript

- Full-stack platform centralizing **100+ programming resources**; PHP backend + MySQL + responsive JS frontend reduced content-search time by **40%**.

Legal Situation Assessment Website

JavaScript, HTML, CSS, Gemini AI

- Bilingual (Hindi + English) legal web app powered by Gemini AI covering **20+ Indian legal scenarios**; validated with 10+ users, cutting time-to-answer by **50%**.

Education

University of Engineering and Management

Jaipur, Rajasthan

B.Tech, Computer Science and Engineering – CGPA: 7.52

Expected July 2026

Kendriya Vidyalaya No.3

Jalandhar

Class 12th, CBSE – 82.4%

2022

Kendriya Vidyalaya No.2 (ARMY)

Jodhpur

Class 10th, CBSE – 82.2%

2020

Certifications

Generative AI: Introduction and Applications – Coursera

Joy of Computing using Python – NPTEL

Soft Skill Development – NPTEL

Enhancing Soft Skills and Personality – NPTEL

Achievements

Selected as a participant in **Acehack 2.0** (24-hour hackathon) and successfully delivered a working Python-based police translation tool within the deadline.

Shortlisted for ideation round at **CodeFiesta 2.0**, presenting an AI product solution to a judging panel of engineering directors and CTOs.

Designed and deployed multiple full-stack and AI-integrated applications independently, covering frontend, backend, and ML components end to end.
